

## **Senior Mine Geologist**

You will have the chance to engage in the following;

- Participate in the mine production restarts; actively participate in establishing underground drilling programs.
- Involved with resources calculations in a narrow vein mining environment and account for “nugget-effect” grade variations.
- Establish and maintain a close follow-up of the department budget.
- Establish and maintain relationship with operations and technical staffs in order to develop a safe working environment and efficient production.

You will have the following requirements;

- B.Sc. degree or higher in geology or in geological engineering;
- Solid experience in mining geology; 5 + years experience
- Strong computer skills and functional with most software used in mining industry
